Abstract

These data, collected to assist in the development of sentencing guidelines, describe offense and sentencing characteristics for organizations sentenced in federal district courts in 2007. The United States Sentencing Commission's primary function is to inform federal courts of sentencing policies and practices that include guidelines prescribing the appropriate form and severity of punishment for offenders convicted of federal crimes. Court-related variables include primary offense type, pecuniary offense loss and gain, dates of disposition and sentencing, method of determination of guilt, number of counts pled and charged, and dates and types of sentencing and restitution. Defendant organization variables include ownership structure, number of owners and employees, highest level or corporate knowledge of the criminal offense, highest level of corporate indictment and conviction

UNITED STATES SENTENCING COMMISSION

PUBLIC RELEASE CODEBOOK FOR ORGANIZATIONAL CASES

FISCAL YEAR 2007

INTRODUCTION

The United States Sentencing Commission collects demographic, sentencing, and guideline application information on cases which are sentenced under the guidelines in the federal court system. Cases involving organizations as the offenders are collected in a separate database than individual offenders. This codebook contains information about organizations. For more information about individual offenders, see the individual offender codebook.

Understanding the federal sentencing guidelines, and the Chapter 8 organization guidelines in particular, is crucial to properly using the Commission's organizations data. To learn more about the Commission and the federal sentencing guidelines, please visit the Commission's website, www.ussc.gov, and read through the Guideline's Manuals, Annual Reports, and Sourcebooks as well as various on-line training materials and reports. Additionally, there is a link at the top of the Commission's homepage dedicated specifically to information about the organization guidelines (<http://www.ussc.gov/orgguide.htm>). ***Using multiple years worth of guideline manuals is necessary for most guideline analysis due to yearly amendments in the guidelines.***

This codebook contains information on variables available on the fiscal year 2007 datafile. Additional information about the organizational coding is available in the *Coding Instructions for the Organization Datafile*.

The first column in the codebook, NAME, lists the SAS name of the each variable in alphabetical order. Under the monitoring variable names, the corresponding research variable name (if one exists) will be listed as: R=Research variable name. At the bottom of this column the corresponding item number from *USSC's Coding Instructions for Organization Cases* is listed.

The second column, ORIGIN, lists the source of the variable. Variables are either taken from documents submitted by the courts or produced by SAS code. This column also includes information on the source document of the raw data. The following list defines the codes for variable origins.

- JC means the information for the variable is obtained solely from the Judgment and Conviction Order.
- PSR states the information for this variable comes only from the Pre-sentencing Report generated by the probation officer.
- JC/PSR indicates the information may be found either on the Judgment and Conviction Order or in the Presentencing Report, with the Judgment and Conviction Order given preference if the information conflicts.
- SOR indicates that the information for the variable is taken only from the Statement of Reasons.
- PSR/SOR means the information for this variable comes from the PSR, but the SOR information is used if it is present and/or conflicts with the PSR.
- PLEA indicates the information comes primarily from the plea agreement.
- IND indicates the information comes from the indictment/information.

- R indicates the information is generated from other coded variables via SAS code. These are referred to as the “research variables”.

The third column, FORM, describes whether the variable is coded as numeric (NUM) or character (CHAR). This column also lists the length of each variable.

The fourth column, CODES, lists all the values for each variable and describes what those values mean. Some of the variables have a large number of values, so these values are listed in the coding attachment at the end of the codebook.

The final column, DESCRIPTION, describes the uses and creation of each variable. This column also contains notes which caution users about variables which have changed definitions from previous years, or are not contained on all years of the data sets. Format statements are also included in bold at the end of each description. These formats will allow users to access the format statements in SAS from the Sun station. The user will type "FORMAT VARIABLENAME **BOLDNAME.**;" to use these format statements (Note the need for a \$ sign when formatting character variables). Since format statements cannot end in a number, all variables which end in a number "1" will have format statements that end with an "O". Variables which end with a "2" will have format statements ending in "T."

Other sections have been included after the codebook to elaborate on variable information. A code attachment which provides values of lengthy variables follows the codebook. After the code attachment, the code for creating each research variable from the monitoring variables is included. A special section containing helpful SAS fragments has also been added. Additionally, an index has been created to facilitate finding any and all references to a particular variable. Both variables names (ex. MONSEX) and subject headings (ex. GENDER) have been included.

EXPLANATION OF THE NEW GUIDELINE CODING SYSTEM (AVAILABLE STARTING IN FY04):

In order to have access to more guideline cross reference information, the types and quantity of guideline-related data has somewhat changed starting in FY04. The USSC Monitoring Department codes guideline application information about four types of guidelines: Statutory, Reference, Sentencing, and Underlying.

The first guideline coded is known as the statutory guideline (GDSTAT1-GDSTATX¹, GDSTATHI). This guideline is based on the statute(s) of conviction. GDSTAT is the first guideline checked for applicability by the probation officer from the statutory reference list in the back of the *USSG Manual*. All aspects of the statutory guideline are coded (i.e. base offense level and adjustments).

The next guideline is the 1st reference guideline (GDREF1-GDREFX², GDREFHI), coded when applicable. This guideline is only used when the statutory guideline (GDSTAT) refers the probation officer to another guideline (ex. If the statute of conviction is 21:843(b), then the probation officer would go in the USSG Manual to 2D1.6 (the GDSTAT1 guideline). This guideline then refers the probation officer to 2D1.1 (the GDREF1 guideline) in order to find the correct base offense level. All aspects of the reference guideline are captured (i.e. base offense level and adjustments).

There is also an option to code a 2nd reference guideline (GDCROS1-GDCROXX, GDCROSHI). A second cross reference occurs when the probation officer (PO) starts out at one guideline and gets cross-referenced to another guideline which then cross-references to a third guideline. All aspects of the cross reference guideline are coded (i.e. base offense level and adjustments).

The guideline which best explains the sentence (i.e. the last guideline which increases or decreases levels) is known as the sentencing guideline (GDLIN1-GDLINEX³, GDLINHI). The GDLIN will be the same as the GDSTAT if no reference guideline (GDREF) is used (i.e. the probation officer begins and ends at the same guideline, and does not pick up a base offense level or any adjustments from any other guideline). All aspects of the sentencing guideline are coded (i.e. base offense level and adjustments).

Most cases do not contain any cross-references so the GDSTATHI and the GDLINHI will be the same and the GDREFHI and the GDCROSHI will both be blank. Note that cases can have multiple guideline computations (these will not necessarily match up with the number of counts of conviction - see USSG Manual for grouping rules). The first computation is denoted with a "1" at the end of the guideline fields (i.e. GDSTAT1, GDREF1, GDCROS1, and GDLIN1). The case on the fiscal year datafile with the highest number of guideline computations determines the "top" number for the cases in that year (e.g. If in FY04 there was a case with 27 computations then all cases on the datafile would have GDSTAT1-GDSTAT27, GDREF1-GDREF27, GDCROS1-GDCROS27, and GDLIN1-GDLIN27). The "high" guideline is determined by the computation with the highest adjusted offense level (ADJOFL1-X).

¹ Prior to 1999, only five statutory guideline computations were coded.

² Prior to 1999, only five reference guideline computations were coded.

³ Prior to 1999, only five sentencing guideline computations were coded.

EXAMPLES OF THE GUIDELINE CODING SYSTEM:

1. If the defendant was convicted of one count of selling drugs near a school, then the GDSTATHI would be §2D1.2, the GDREFHI would be §2D1.1, and the GDLNEHI would be §2D1.2. The GDCROS guideline would be blank since there was not a third cross-reference.
2. If a defendant was convicted of one count of selling drugs near a protected location while on supervised release, then the PO starts at §2J1.7 (Commission of an offense while on release) which says to go to the underlying offense. §2J1.7 is the GDSTATHI. The underlying offense (GDREFHI) is §2D1.2 (Drug Offenses near a protected location) which cross-references (GDCROSHI) the PO to §2D1.1 (Drug Trafficking) to get the offense level based on the drug quantity table. Since the PO must go back to §2J1.7 to add the 3 points from this guideline after applying both §2D1.1 and §2D1.2, then the final sentencing guideline (GDLNEHI) is §2J1.7.
